

NEW SAFETY BEACONS FOR CARAVAN AND LEISURE

Australia's compact flashing safety light beacon specialist, Eflare Corporation of Melbourne, has expanded its locally-developed line-up to now include caravan and leisure applications.

The TF510 runs on two D cell batteries, has a flashing red or amber beacon but can also be switched to become a very effective torch. This is an industrial-strength unit with a safety flash that can be seen for many kilometers at night. It has been specially built to offer this new two-in-one function for the caravan and motorhome market.

The attractively-priced amber EF300 is a compact flashing light beacon of tough construction which gives hi-visibility 360 degree LED light for up to 30 hours on four AA batteries. It is available in either red or amber flashing colour.

These new products will be very attractive to a huge range of consumer applications on the road says Eflare's Tim Parker. We've already had a great response from all those who've tried them during our recent trialling period.. Their attention-grabbing light and the fact that they are based on our top industrial-strength products ensures they deliver under the toughest conditions. Additionally they are now backed by a very useful number of accessories like flexible mounts and lanyards as well as our products being recommended by police forces.

Very much a case of there is now a safety beacon for leisure travellers and every glove compartment should have one. Parker said.?
